AGROTYP was created in 1986, in the area of Veria and today is one of the most modern units for packaging of agricultural products in Greece. The purpose of the company is to meet the needs of the consumer with top quality products.

In a privately owned space of 3000 sq.m. and with the most modern technological equipment, AGROTYP selects, packages and offers mother earth products, with high hygiene standards and strict packaging rules.

AGROTYP continues to grow through the continuous investment in the improvement of its products, but also in the design of new products. In this, an important role is played by the experienced, trained and specialized staff of the company, which with the aim of ensuring top quality and respecting the environment, produces and offers its products to the consumer.

Today, consumers' perceptions of food consumption tend to take a whole new direction. There is a growing demand and shift of consumers to certified healthy food, of proven origin and mode of production. With this in mind, AGROTYP, with deep knowledge of eating habits and respect for the consumer, offers high quality products, thus contributing daily to the proper nutrition of the consumer.

In 2016, the company, respecting the preference of the market for Greek products, started to produce its own Greek Legumes at the foot of Mount Vermio with the aim of offering the excellent quality of its products at competitive prices. The original area was 74 acres and today exceeds 500.

The company has its own distribution network in the Region of Central Macedonia. In the rest of the country and abroad, the sale and distribution is done by its representatives.
